A

AAPOORTI PARTNER NETWORK

E□Franchise Complete Workflow

From network setup and customer order capture to franchise pickup or delivery at the franchisee’s registered address.

CUSTOMER-HOME DELIVERY IS NOT PERMITTED

Operational baseline · Admin · Franchisee · Outlet POS · Guard · Delivery

1. The operating model

Aapoorti is an assisted-commerce network. The franchisee records a customer's purchase, while the assigned outlet stocks, bills, packs and dispatches the goods. The customer is the buyer record—not the delivery destination.

The non-negotiable fulfilment rule

Every parcel follows exactly one of two paths: (A) Franchise pickup from the assigned outlet, or (B) Aapoorti delivery to the franchisee's registered delivery address. The delivery partner never travels to the customer's home.

Who does what

ROLE	PRIMARY RESPONSIBILITY	HANDOFF / RESULT
Admin	Creates outlets, users, franchise profiles, wallet rules, products, commissions, promotions and compliance settings.	A configured and auditable network.
Franchisee	Records the customer, builds the basket, chooses pickup or franchise delivery, and executes through the wallet.	An ON_HOLD or EXECUTED order.
Outlet POS	Bills, picks, individually packs and optionally groups same-franchise bills into a docket.	A packed bill or docket at the guard desk.
Delivery Guard	Controls custody, verifies measured weight and releases the parcel to the correct receiver.	Franchise pickup or delivery assignment.
Delivery Partner	Accepts, picks up, travels to the registered franchise address and captures franchise proof.	Delivered order with OTP/signature/photo reference.

2. End-to-end journey

1	ADMIN SETUP	Outlet, roles, franchise destination, wallet and commercial rules
2	CUSTOMER ORDER	Franchisee records buyer and builds the basket
3	WALLET GATE	Execute if funded; otherwise hold safely
4	OUTLET POS	Bill → pick → pack individually → optional docket
5	GUARD	Receive custody → verify weight → approve release
6A	FRANCHISE PICKUP	Franchisee collects from assigned outlet
6B	FRANCHISE DELIVERY	Delivery partner takes parcel to registered franchise address
7	COMPLETION	Proof, delivered status, ledger and audit trail

Decision at the guard desk

Pickup selected: release only to the franchisee. Delivery selected: create a delivery task addressed to the franchisee’s registered destination. Dockets cannot mix these fulfilment modes.

3. Detailed workflow

A. Admin prepares the network

- Create the outlet and its POS, Guard and Delivery users.
- Onboard the franchisee with shop, banking, mapped outlet and registered delivery address.
- Record the advance; the configured share (default 75%) becomes wallet credit.
- Publish product prices, unit weights, pack multipliers, commissions and promotions.
- Set delivery price, free-delivery quota, weight tolerance and alert-blocking policy.

B. Franchisee records the sale

- Record customer name and mobile only as the buyer identity.
- Build the basket and review price, promotion, commission and delivery cost.
- Choose Franchise Pickup or Deliver to Franchise.
- For delivery, the backend always uses the registered franchise delivery address—even if another address is submitted manually.

C. Wallet authorizes execution

- If the wallet covers the total, debit exactly once and mark EXECUTED.
- If funding is insufficient, save ON_HOLD; the outlet cannot see or pack it.
- After wallet credit, execute the held order. A permitted cancellation refunds exactly once.

D. Outlet fulfils

- Only EXECUTED orders appear in the POS queue.
- Generate one bill per order, pick from the floor and mark it PACKED_INDIVIDUALLY.
- Send a single bill to the guard, or group packed bills from the same franchise and same fulfilment mode into one docket.

E. Guard verifies and releases

- Accept custody from POS and compare measured weight with system-calculated expected weight.
- PASS when within tolerance; ALERT when outside tolerance. Blocking alerts cannot be dispatched.
- Release to the franchisee for pickup or to the assigned delivery partner for franchise delivery.

F. Delivery completes

- Accept assignment → confirm pickup from guard → start trip.
- Navigate to the registered franchise delivery address and call the franchisee—not the customer.
- Capture franchisee OTP, signature or handover-photo reference, then mark DELIVERED.

4. Status and custody map

STAGE	STATUS	CUSTODY / MEANING
Order	ON_HOLD	Not funded; invisible to outlet operations.
Order	EXECUTED	Wallet debited; outlet may start fulfilment.
POS	BILLED → PACKED_INDIVIDUALLY	Outlet owns and prepares the parcel.
Docket	DOCKET_CREATED	Compatible packed bills grouped into one load.
Guard	AT_GUARD_DESK	Custody transferred from POS to guard.
Guard	WEIGHT_CHECK_PASSED / ALERT	Parcel verified or held for recheck.
Pickup	PICKED_BY_FRANCHISEE	Franchisee received parcel from outlet guard.
Delivery	ASSIGNED → ACCEPTED → PICKED_UP → OUT_FOR_DELIVERY	Delivery partner carries parcel to franchise destination.
Complete	DELIVERED	Franchise proof captured and order closed.

Custody principle

At every moment the system can identify who controls the parcel: Outlet POS, Guard, Franchisee or Delivery Partner. Every handover creates an audit record.

5. Exception paths and controls

SITUATION	SYSTEM RESPONSE	WHY IT IS SAFE
Insufficient wallet	Force ON_HOLD; do not expose to POS.	No unfunded fulfilment begins.
Execute held order	Recheck active status and live balance before one debit.	Prevents negative and duplicate debits.
Cancel executed order	Allow only before billing and create one wallet refund.	Protects financial and physical consistency.
Weight variance	PASS or ALERT against configured tolerance.	Catches likely quantity/item mismatch.
Blocking alert	Disable guard handover until corrected.	Bad parcels cannot leave custody.
Mixed docket	Reject different franchisees or fulfilment modes.	One docket has one destination and receiver.
Customer address submitted	Ignore it and use registered franchise delivery address.	Customer-home delivery remains impossible.
Missing delivery proof	Block DELIVERED status until proof reference is entered.	Final handover remains accountable.

What remains traceable

- Advance receipts, wallet credits, order debits, adjustments and refunds.
- Order creation, execution, packing, docketing, weight results and completion.
- Every custody handover with actor, role, entity, timestamp and notes.
- Delivery assignment stages and franchisee proof of receipt.

Final outcome

The customer buys through the franchisee. The outlet fulfils the order. The parcel ends with the franchisee—either by outlet pickup or delivery to the franchisee’s registered address—and the system preserves the complete financial and custody history.
